Professional Summary

Software Engineer, passionate coder, and Startup Founder with a strong foundation in designing scalable system architectures and web infrastructure. Highly adaptable and skilled at translating complex business needs into technical execution, driving projects from concept to deployment.

Skills

Programming Languages: JavaScript, Java, HTML/CSS, Python, PHP

Web Dev & Frameworks: React, Next.js, Node.js, Express, Tailwind CSS, Prisma

Cloud, DevOps & Databases: AWS, Docker, Vercel, Linux (Ubuntu), SSH, Cron, GitHub Actions, MySQL

Tools & Core Competencies: Git, Figma, System Architecture, Infrastructure Design, Task Prioritization, Adaptability

Experience

Founder & Lead Software Engineer · Upsertsolution

Feb 2026 – Present

- Architected the startup's core infrastructure, landing page, and integrated blog platform using Next.js, Node.js, and a SQL database to establish the company's initial web presence.
- Engineered an extensible admin portal with role-based access control, seamlessly connecting to backend services to streamline future daily operations and client management.
- Designed a scalable backend architecture and database schema focused on high performance and maintainability to support planned company expansion and user growth.

Associate Software Engineer (Intern) · FullSuite

Jan 2026 – Present

- Improved daily workflow efficiency for employees by developing and integrating a new module using React and Node.js.
- Reduced manual administrative tasks by building automated internal tools, while actively contributing to the strategic planning of a more scalable system architecture.

IT Committee Officer · Saint Louis University Commission on Elections (COMELEC)

Aug 2024 – Present

- Maintained and enhanced the SLU COMELEC voting system by collaborating with 6 officer-developers, ensuring secure and seamless elections for a student body of over 20,000.
 - Achieved 99% system uptime during peak voting periods for a PHP-based voting system by resolving bugs and utilizing SSH and Cron jobs to automate database backups and monitor Ubuntu server health.
-

Project

IT Project – SLU CCA Ticketing System

- Led a team of 7 developers to build a comprehensive ticketing system using React and Node.js, successfully managing shows and generating automated sales reports.
- Streamlined the ticket management process by designing and integrating 3 dedicated user modules (admin, distributor, customer).
- Collaborated directly with university stakeholders through 5 iterative feedback cycles to ensure the final product met real-world operational needs.

Education

Saint Louis University

Bachelor of Science in Information Technology

- Awards: Consistent Dean's Lister

Baguio City, Benguet

Expected July 2026
